Ideation Phase
Brainstorm & Idea Prioritization Template

Date	15/10/2026
Team ID	
Project Name	Metro Ticket Booking System using ServiceNow
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Problem statement (How Might We): How might we enable metro commuters to book tickets quickly and accessibly, without queues or cash, by generating digital QR-code tickets automatically using ServiceNow?

Session set-up: 10 minutes preparation, 1 hour collaboration, 4 team members. Goal: decide which features should be built first for the Metro Ticket Booking application.

Participant	Role in the project	Focus area during brainstorm
Team Member 1	Team lead / ServiceNow developer	Service Catalog and booking form
Team Member 2	Flow Designer developer	Fare calculation and ticket automation
Team Member 3	Notification & QR specialist	Email notifications and QR ticket
Team Member 4	Tester / documentation	User experience, testing, reports

Key rules of brainstorming: stay in topic, encourage wild ideas, defer judgment, listen to others, go for volume, and if possible be visual.

Step-2: Brainstorm, Idea Listing and Grouping

Each participant wrote down ideas that address the problem statement (10 minutes). Similar ideas were then clustered and each cluster was given a sentence-like label (20 minutes).

Participant	Ideas listed
Team Member 1	• Book ticket by selecting source and destination stations • Pick journey date and number of passengers • Single-page Service Catalog item that works on mobile
Team Member 2	• Automatic fare calculation from a fare matrix • Flow Designer flow that creates the ticket record • Cancel a ticket and update its status
Team Member 3	• Generate a unique QR code for every ticket • Email the ticket and QR code instantly

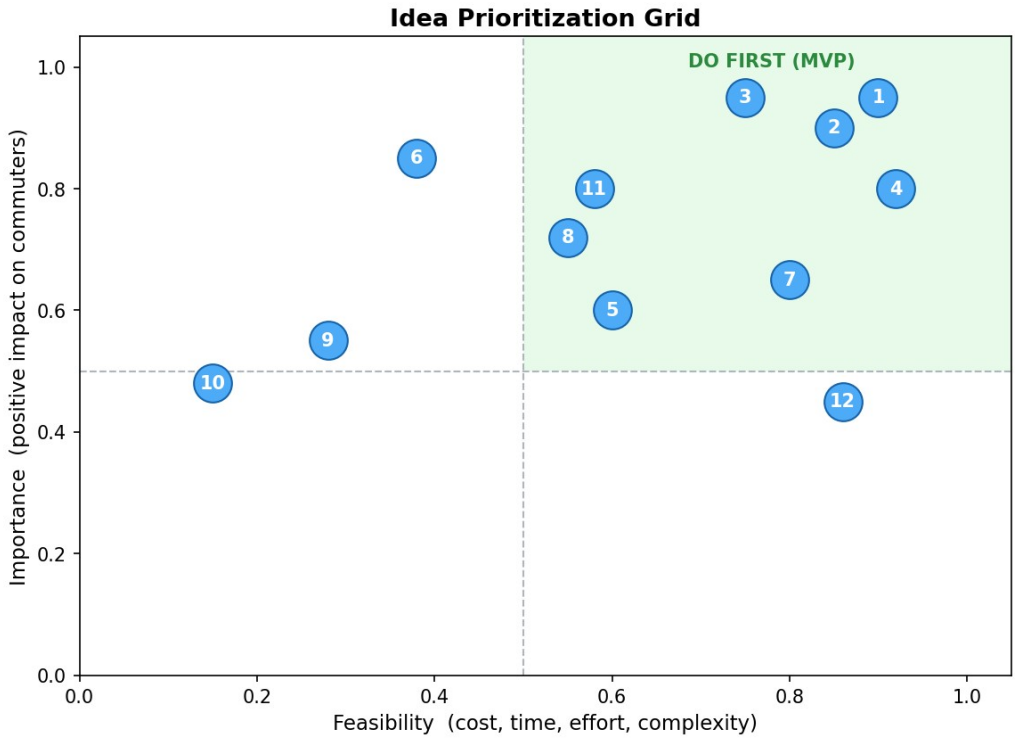

Participant	Ideas listed
	• Reminder notification before the journey date
Team Member 4	• Admin dashboard for bookings and revenue • Gate-side QR validation • Booking history, easy re-booking and accessible, multilingual UI

Grouped ideas (clusters):

Cluster label	Ideas in the cluster	Related idea numbers
Commuters can book a ticket in a few clicks	Book via Service Catalog, select stations, date and passengers, booking history and re-book	1, 12
The system works out the fare and ticket automatically	Automatic fare calculation, QR digital ticket, cancel/refund	2, 3, 5
Passengers are kept informed instantly	Email notification with ticket, reminders	4
Metro staff control and verify everything	Admin dashboard and reports, gate QR validation API	7, 11
Future enhancements for a richer experience	Online payment gateway, accessibility and multilingual UI, season pass, AI crowd prediction	6, 8, 9, 10

Step-3: Idea Prioritization

The team placed every idea on the Importance versus Feasibility grid (20 minutes). Ideas in the top-right quadrant are the ones the team will deliver first.

No.	Idea	Importance	Feasibility	Decision
1	Book ticket via Service Catalog	High	High	Build now (MVP)
2	Automatic fare calculation	High	High	Build now (MVP)
3	QR code digital ticket	High	High	Build now (MVP)
4	Email notification with ticket	High	High	Build now (MVP)
7	Admin dashboard and reports	Medium	High	Build now
12	Booking history and re-book	Medium	High	Build now
5	Cancel / refund ticket	Medium	Medium	Next sprint
11	Gate QR validation API	High	Medium	Next sprint
8	Accessibility and multilingual UI	High	Medium	Next sprint
6	Online payment gateway	High	Low	Future scope
9	Season pass / smart card top-up	Medium	Low	Future scope
10	AI crowd and route prediction	Medium	Low	Future scope
