Project Design Phase
Proposed Solution Template

Date	15/10/2026
Team ID	
Project Name	Metro Ticket Booking System using ServiceNow
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Metro passengers spend a lot of time in queues to buy tickets, depend on cash and counters, and are unsure of fares. Metro operators handle ticketing and fares manually, which causes errors and delays. A fast, accessible and automated digital ticketing process is needed.
2.	Idea / Solution description	Digitize metro ticket booking using ServiceNow. The passenger selects source and destination stations and travel details in a Service Catalog item. The fare is calculated automatically, and Flow Designer generates a digital ticket with a QR code instantly. Notifications send the ticket and confirmation to the passenger by email.
3.	Novelty / Uniqueness	Uses a low-code enterprise workflow platform (Service Catalog, Flow Designer, Notifications) for a public-transport ticketing use case. The whole process from request to fare, ticket, QR code and notification is automated end to end, and can be changed by configuration instead of programming.
4.	Social Impact / Customer Satisfaction	Saves passengers' time, reduces crowding at counters, and supports cashless and paperless travel. Improves accessibility for senior citizens and differently-abled passengers, who can book without standing in a queue. Gives instant confirmation, which increases passenger confidence.
5.	Business Model (Revenue Model)	Revenue comes from the ticket fare collected on each digital booking. Possible additions: convenience fee on bookings, season passes and subscriptions, and sponsored messages or partner offers. Lower counter and paper costs for the metro operator.
6.	Scalability of the Solution	New stations, routes and fares are added as data records. The ServiceNow platform can handle more users and bookings, and the same design can be extended to more metro lines, cities, other transport modes, online payment and mobile-app entry.
